

# Weekly Completion Rate Report

08/26/2024 - 08/19/2024

## Report Context

- Analysis is now performed on a deeper level, there are 2 key metrics: completion rate and success rate:

Completion rate refers to the percentage of Blue Prism instances that are completed or properly handle a business exception in relation to the total number of Blue Prism instances.

Success rate is a business facing success metric, that measures success in terms of requests. A request is a loan that is triggered for a Blue Prism process to pick up, and if this request is completed within the established criteria (3 retries without human intervention), then it is considered a completion (not in current report, still under development)

- Completion rate takes a business exceptions as a success since the path is handled accordingly.
- Higher volume due to month end.
- eFolder process retired since 08/21.

# ICD

- 08/19 error opening loans.

Total instances: 3733

Completed: 2802
